TABLE OF CONTENTS:

MEMBRANE-ACTIVE PEPTIDES Methods and Results on Structure and Function

edited by □ **MIGUEL A. R. B. CASTANHO**

Contents

Preface vii

Acronyms and Abbreviations xix

Contributors xxiii

1. Introduction to the Theme: Seeking Clarity for Membrane-Active Peptides 1

Robert E. W. Hancock

Acknowledgments 7

References 7

2. Membrane-Active Peptides: What after Babylon? 11

Miguel A. R. B. Castanho

2.1. Whether Membrane-Active Peptides? 13

2.1.1. Peptides in a Landscape 15

2.1.2. Peptides as Protein-Domain Models 15

2.1.3. The Clinical Edge 16

2.1.4. Peptide Toxicology 16

2.1.5. A Kingdom To Be United? 21

2.2. Call for a New Discipline? 21

Acknowledgments 23

References 23

3. Matrix Formalism for Sequence-Specific Biopolymer Binding to Multicomponent Lipid Membranes 29

Vladimir B. Teif, Daniel Harries, Dmitri Y. Lando, and Avinoam Ben-Shaulb

3.1. Introduction 31

3.2. Biology of Membrane Binding 32

3.3. Physics of Polymer-Membrane Binding 33

3.4. The Transfer Matrix Method 36

3.4.1. General Comments 36

3.4.2. States Enumeration 37

3.4.3. Bound Polymer Segments 38

3.4.4. Electrostatic Corrections to the Binding Constants 39

3.4.5. Entropy of Lipid Sequestration 39

3.4.6. Loops and Tails 41

3.4.7. Transfer Matrix Construction 42

3.4.8. Calculating Binding Probabilities 43

3.5. Constructing the Matrix Model for the MARCKS Protein 45

3.5.1. Image Quality 46

3.5.2. Types of Elementary Units 46

3.5.3. Choosing Parameters 47

3.6. Calculating MARCKS-Membrane Binding 48

3.7. Potential Applications to More Complex Systems 50

| | |
|--|------------|
| Acknowledgments | 50 |
| References | 51 |
| | |
| 4. Prediction of Membrane-Contacting Protein Surfaces | 55 |
| <i>Igor F. Tsigelny, Yuriy Sharikov, Ross C. Walker, Jerry Greenberg, Valentina Kouznetsova, Mark A. Miller, Eliezer Masliah</i> | |
| 4.1. Amino Acid-Membrane Interaction | 57 |
| 4.2. Assessment of Membrane-Contacting Potential of Proteins | 65 |
| 4.2.1. Calculations of Membrane-Contacting Parameters for Amino Acids | 67 |
| 4.2.2. Binding-Free-Energy Calculations | 71 |
| 4.2.3. Membranophilic Plane Selection Calculations | 73 |
| 4.2.4. Predicted Membrane-Contacting Proteins and Membrane-Contacting Surfaces | 76 |
| 4.3. Concluding Notes | 80 |
| References | 80 |
| | |
| 5. Langmuir Monolayers at the Liquid-Air Interface: A Useful Tool to Study the Interaction of Membrane-Active Peptides with Phospholipids | 83 |
| <i>Juan M. García-Ruiz</i> | |
| 5.1. Introduction | 85 |
| 5.2. Experimental Techniques | 87 |
| 5.2.1. Circular Dichroism | 87 |
| 5.2.2. IR Reflection-Absorption Spectroscopy | 90 |
| 5.2.3. Grazing-Incidence X-Ray Diffraction | 96 |
| 5.2.4. Specular X-Ray Reflectivity | 100 |
| 5.2.5. Preparation of Lipid Vesicles | 102 |
| 5.2.6. Preparation of Lipid Monolayers at the Air-Buffer Interface | 103 |
| 5.3. Results | 103 |
| 5.3.1. NK-2 Structure in Aqueous Solutions | 103 |
| 5.3.2. NK-2 Adsorption at the AirLiquid Interface | 104 |
| 5.3.3. NK-2 Adsorption at Phospholipid Monolayers | 105 |
| 5.4. Summary | 110 |
| References | 113 |
| | |
| 6. The Study of Biomolecular-Membrane Interactions Using Surface Plasmon Resonance Spectroscopy | 119 |
| <i>Leonard Keith Pattenden, Henriette Mozsolits, and Marie-Isabel Aguilar</i> | |
| 6.1. Introduction | 121 |
| 6.2. Surface Plasmon Resonance Spectroscopy | 123 |
| 6.3. Noncommercial Sensor Surfaces and Instruments | 124 |
| 6.4. Commercially Available Surfaces and SPR Instruments | 125 |
| 6.4.1. Modified Dextran-Based Surfaces | 125 |
| 6.4.2. Hybrid Bilayer Membrane Surfaces | 126 |
| 6.4.3. Experimental Protocols for Membrane Interaction Studies by SPR Spectroscopy. | 126 |
| 6.4.4. Liposome Preparation | 127 |
| 6.4.5. Formation of Supported Lipid Monolayer (HBM) and Bilayer Systems | 128 |
| 6.4.6. Peptide Binding to the HPA-HBM and L1-Bilayer Systems | 129 |
| 6.4.7. Variation of Flow Rate | 131 |
| 6.4.8. HPA versus L1 Sensor Chip | 132 |
| 6.5. Theoretical Considerations | 135 |
| 6.5.1. Linearization Analysis | 136 |
| 6.5.2. Numerical Integration Analysis | 137 |
| 6.5.3. Steady-State Approximations | 139 |
| 6.5.4. A Case Study: Antimicrobial Peptides | 141 |
| 6.6. Conclusions | 144 |

| | |
|---|------------|
| References | 144 |
| 7. Laser Light Scattering Approach to Peptide-Membrane Interaction | 151 |
| <i>Marco M. Domingues and Nuno C. Santos</i> | |
| 7.1. Introduction | 153 |
| 7.2. Static Light Scattering | 155 |
| 7.2.1. Sample Preparation | 159 |
| 7.3. Dynamic Light Scattering | 159 |
| 7.3.1. Sample Preparation | 163 |
| 7.4. ζ Potential | 164 |
| 7.4.1. Sample Preparation | 167 |
| 7.5. Applications | 167 |
| 7.6. Other Practical Aspects | 174 |
| 7.7. Conclusion | 175 |
| Acknowledgments | 175 |
| References | 176 |
| 8. Giant Unilamellar Vesicles, Fluorescence Microscopy and Lipid-Peptide Interactions | 179 |
| <i>Ernesto E. Ambroggio and Luis A. Bagatolli</i> | |
| 8.1. Introduction | 181 |
| 8.2. Giant Unilamellar Vesicles | 183 |
| 8.2.1. Recent Updates in Protocols for GUV Formation | 184 |
| 8.2.2. Protocols to Generate GUVs | 185 |
| 8.3. Applications of GUVs in Lipid-Peptide Interaction Using Fluorescent-Microscopy-Related Techniques | 190 |
| 8.3.1. Pore Formation versus Membrane Solubilization | 190 |
| 8.3.2. The Importance of Choosing the Entrapped Fluorescent Probes: The Case of Carboxyfluorescein | 192 |
| 8.3.3. Membrane Translocation of Peptides | 193 |
| 8.3.4. Effect of Peptide Interaction on Membrane Lateral Structure | 193 |
| 8. Future Perspectives | 194 |
| Acknowledgments | 194 |
| References | 195 |
| 9. The Structural and Topological Analysis of Membrane Polypeptides by Oriented Solid-State NMR Spectroscopy: Sample Preparation and Theory | 201 |
| <i>Burkhard Bechinger, Philippe Bertani, Sebastiaan Werten, Cléria Mendonça de Moraes, A. James Mason, Christopher Aisenbrey, Barbara Perrone, Marc Prudhon, U. S. Sudheendra, and Verica Vidovic</i> | |
| 9.1. Introduction | 203 |
| 9.2. Reconstitution of Membrane Polypeptides from Organic Solution | 205 |
| 9.3. Reconstitution of Membrane Polypeptides in Aqueous Environments | 209 |
| 9.4. Mechanically Orienting the Samples | 211 |
| 9.5. Oriented NMR Measurements: Experimental Considerations | 213 |
| 9.6. Orientation-Dependent Solid-State NMR Used for the Structural Analysis of Membrane Polypeptides | 214 |
| 9.7. Motional Averaging and Membrane Peptide Aggregation | 218 |
| 9.8. Example Spectra | 220 |
| Acknowledgments | 222 |
| References | 222 |
| 10. Peptide-Membrane Interactions Studied by Ellipsometry, Laser Scanning Microscopy, and Z-Scan Fluorescence Correlation Spectroscopy | 227 |
| <i>Adam Miszta, Radek Machan, Wim Th. Hermens, and Martin Hof</i> | |
| 10.1. Introduction | 229 |

| | |
|---|------------|
| 10.1.1. Antimicrobial Peptides | 230 |
| 10.1.2. Supported Phospholipid Model Membranes | 231 |
| 10.2. Experimental Techniques | 232 |
| 10.2.1. Basic Principles of Ellipsometry | 232 |
| 10.2.2. Basic Principles of Z-Scan Fluorescence Microscopy | 236 |
| 10.3. Results-Interaction of Cryptdin-4 and Magainin 2 with Negatively Charged Bilayers | 243 |
| 10.4. Summary | 247 |
| Acknowledgments | 248 |
| References | 248 |

11. Quantification and Proteolytic Analysis of Cell-Penetrating Peptides and Cargo in Eukaryote Cells 257

Sandrine Sagan, Diane Delaroche, Baptiste Aussedat, Soline Aubry, Gérard Bolbach, Isabel D. Alves,

Solange Lavielle, Gérard Chassaing, and Fabienne Burlina

| | |
|--|------------|
| 11.1. Introduction | 259 |
| 11.2. General Protocol Outline | 262 |
| 11.2.1. Peptide Design | 263 |
| 11.2.2. Key Steps for the Accuracy of the Method | 267 |
| 11.3. Quantification of Cell-Penetrating Peptides and Pseudopeptides | 270 |
| 11.4. Kinetics of Uptake and Metabolism of CPP in CHO Cells | 272 |
| 11.5. Cargo Internalization Quantification | 273 |
| 11.6. Cytotoxicity of Cell-Penetrating Peptides | 274 |
| 11.7. Toward the Mechanism of Entry? | 274 |
| Acknowledgments | 275 |
| References | 275 |

12. Planar Lipid Bilayers for Electrophysiology of Membrane-Active Peptides 281

Fabrice Homblé, Lamia Mlayeh, and Marc Léonetti

| | |
|---|------------|
| 12.1. Introduction | 283 |
| 12.2. Basic Electrical Properties of a Planar Lipid Bilayer | 287 |
| 12.2.1. Membrane Potential | 288 |
| 12.2.2. Membrane Current | 288 |
| 12.2.3. Membrane Capacitance | 289 |
| 12.2.4. Membrane Conductance | 290 |
| 12.3. Recording Equipment | 291 |
| 12.3.1. The Faraday Cage | 292 |
| 12.3.2. Antivibration Platform | 293 |
| 12.3.3. Electrodes | 293 |
| 12.3.4. Preparation of Ag-AgCl Electrodes | 293 |
| 12.3.5. Preparation of Salt Bridges | 294 |
| 12.4. Experimental Solutions | 296 |
| 12.4.1. Aqueous Solutions | 296 |
| 12.4.2. Lipid Solutions | 296 |
| 12.5. Formation of a Planar Lipid Bilayer | 297 |
| 12.5.1. Painted Planar Lipid Bilayers | 297 |
| 12.5.2. Folded Planar Lipid Bilayers | 298 |
| 12.5.3. Membrane Thickness | 299 |
| 12.5.4. Membrane Conductance | 300 |
| 12.5.5. Painted versus Folded Bilayer | 302 |
| 12.5.6. Artifacts | 303 |
| 12.6. Concept of Membrane Potential | 304 |
| 12.6.1. Dipole Potential | 307 |
| 12.6.2. Surface Potential Difference | 310 |
| 12.7. Conclusions | 310 |

References **250**

13. Atomic Force Microscopy Studies of Peptide-Membrane Interactions 321

Yves F. Dufrêne

- 13.1. Introduction **323**
- 13.2. Methodology **325**
 - 13.2.1. Preparing Supported Lipid Films 325
 - 13.2.2. Atomic Force Microscopy Methodology 329
- 13.3. Applications **331**
 - 13.3.1. Imaging Supported Lipid Membranes 331
 - 13.3.2. Real-Time Imaging of Peptide-Membrane Interactions 334
- Acknowledgments 337
- References **338**

14. Cell-Penetrating Peptides-Uptake, Toxicity, and Applications 341

Gisela Tünnemann and M. Cristina Cardoso

- 14.1. Introduction-Bits and Pieces of CPP History **343**
- 14.2. Influence of Cargo on Mode of Uptake **345**
 - 14.2.1. Affinity Tags and Protease Removal Sites 346
 - 14.2.2. Low-Molecular-Weight Cargoes 346
 - 14.2.3. Special Role of Arginine-Rich Peptides in Cellular Uptake 348
 - 14.2.4. Relevant Parameters when Measuring CPP Uptake 349
- 14.3. Models for the Mechanism of Transduction **350**
 - 14.3.1. Pore Formation 350
 - 14.3.2. Formation of Inverted Micelles 350
 - 14.3.3. Adaptive Translocation 352
- 14.4. Toxicity of Cell-Penetrating Peptides **354**
 - 14.4.1. *In Vitro* 354
 - 14.4.2. *In Vivo* 355
- 14.5. CPP-Mediated Intracellular Delivery in Molecular Medicine Applications **356**
 - 14.5.1. Labeling and Imaging 356
 - 14.5.2. Modulation of Intracellular Function 357
- 14.6. Conclusions and Perspectives **360**
- Acknowledgments 363
- References **363**

15. Cell-Penetrating Peptides: Trojan Horse for Macromolecule Delivery in Plant Cells 373

Archana Chugh and François Eudes

- 15.1. Introduction **375**
- 15.2. Uptake of CPPs in Plants **377**
 - 15.2.1. Preparation of Plant Cells and Tissues 377
- 15.3. Translocation of Fluoresceinated CPPs in Plant Cells **380**
 - 15.3.1. Protoplasts 380
 - 15.3.2. Microspores 380
 - 15.3.3. Zygotic Embryos 381
 - 15.3.4. Leaf Bases and Root Tips 381
 - 15.3.5. Fluorescence and Fluorimetric Analysis 382
- 15.4. Delivery of CPP-Driven Macromolecular Cargo Complexes in Plant Cells and Tissues **383**
 - 15.4.1. Noncovalent Protein Transduction in Plant Cells 383
 - 15.4.2. Transfection of Plant Cells and Tissues with CPP-Plasmid DNA Complex 385
- 15.5. Effect of Endocytic and Macropinocytic Inhibitors **387**
- 15.6. FDA Staining Test for Plant Cell Viability **388**
- References **388**

16. Biophysics and the Way Out of the Endosomal versus Non-Endosomal Dilemma for Cell-Penetrating Peptide Pep-1 393

Sónia Troeira Henriques

- 16.1. Introduction **395**
 - 16.1.1. Strategies To Introduce Macromolecules into Cells 395
 - 16.1.2. Peptides as Vectors 397
 - 16.1.3. How Do CPPs Translocate across Cell Membranes? 399
 - 16.1.4. Pep-1: A New Peptide Carrier 401
- 16.2. Insights in the Translocation Mechanism of Pep-1 **401**
 - 16.2.1. Pep-1 Aggregates in Aqueous Environment 402
 - 16.2.2. Pep-1 Has a High Affinity for Lipidic Membranes 403
 - 16.2.3. Pep-1 Modulates Membrane Stability but Does Not Form Pores 406
 - 16.2.4. Pep-1 Translocates across Lipidic Membranes by a Mechanism Promoted by Transmembrane Potential 408
 - 16.2.5. Pep-1 Translocation into Mammalian Cells Occurs by a Mechanism Modulated by Transmembrane Potential 409
 - 16.2.6. Overall Mechanism: Importance of Lipidic Membrane and Electrostatic Interaction on Pep-1 Uptake 411
- 16.3. Toward a New Phase Regarding CPP Mechanisms: The Co-existence of Translocation Mechanisms **414**
- References **418**

17. Structure and Activities of Antimicrobial Peptides at the Bacterial Membrane 427

Francesca Morgera, Lisa Vaccari, Luisa Creatti Nikolinka Antcheva, and Alessandro Tossi

- 17.1. Introduction **429**
- 17.2. Spectroscopic Techniques Applied to AMP-Model Membrane Systems-a Valuable Tool for Molecular Biophysics Studies **431**
 - 17.2.1. Model Membranes as a Tool for Probing Peptide Structural Variations 431
 - 17.2.2. Circular Dichroism Applied to Peptide-Membrane Interactions 435
 - 17.2.3. FTIR Spectroscopy Applied to Peptide Structure Characterization in Solution and Inserted into Membranes 437
- 17.3. CD and FTIR Spectroscopy for AMP Structural Investigations: Methods and Results **442**
 - 17.3.1. CD Methods and Results 449
 - 17.3.2. Transmission and FTIR Measurements on Peptides in Solution 453
 - 17.3.3. ATR-FTIR on Peptide Inserted in Model Membranes 454
- 17.4. Activities of AMPs: Liposome and Bacterial Cell Permeabilization Assays **457**
 - 17.4.1. Dye Release from Preloaded Liposomes 457
 - 17.4.2. Permeabilization of Bacterial Cells by Means of Flow Cytometric and Classical Fluorimetric Methods 460
- Acknowledgments 466
- References **467**

18. Membranotropic Regions of Membrane-Fusion Proteins: The Use of Peptide Libraries 473

Ana J. Pérez-Berná, Jaime Guillén, Miguel R. Moreno, and José Villalain

- 18.1. Introduction **475**
- 18.2. The "Dry Toolbox": Is It Possible To Deduce the Membranotropic Segments of a Protein from Its Sequence? **478**
- 18.3. The "Damp Toolbox": Can We Reproduce the "Dry Toolbox" Results? **480**
- 18.4. Peptide Interaction with the Membrane: Binding, Location and Modulation of

| | |
|---|------------|
| the Membrane Phase Structure | 485 |
| 18.5. Modulation of Peptide Structure by Membrane Binding | 494 |
| References | 498 |

19. NMR to Access the Transient Interactions between Viral Fusion Peptides and Their Target Membranes 505

Andrea T. Da Poian, Fabio C. Almeida, Ana Paula Valente, Ronaldo Mohana-Borges, and Francisco Gomes Neto

| | |
|---|------------|
| 19.1. Introduction | 507 |
| 19.2. Virus-Induced Membrane Fusion | 509 |
| 19.3. Viral Fusion Proteins and Fusion Peptides | 510 |
| 19.4. Experimental Requirements | 511 |
| 19.4.1. Structural Calculation | 512 |
| 19.5. The Case of an Antimicrobial Peptide, PW2 | 514 |
| 19.6. Dynamics of Viral Fusion Peptides-Membrane Interaction Studied by NMR | 515 |
| 19.6.1. Vesicular Stomatitis Virus | 515 |
| 19.6.2. Ebola Virus | 520 |
| References | 522 |

20. HIV-1 Fusion Inhibitor Peptides: A Cross Correlation between Efficacy and Membrane-Level Activity 527

Ana Salomé Veiga and Henri G. Franquelim

| | |
|--|------------|
| 20.1. Introduction | 529 |
| 20.2. Methods and Results | 532 |
| 20.2.1. Photophysical Characterization | 532 |
| 20.2.2. Partition Coefficient Determination | 533 |
| 20.2.3. The Interaction of T-20 and T-1249 with Cholesterol-Containing Membranes | 537 |
| 20.2.4. Interaction of T-1249 with Cholesterol-Rich Areas Vesicles. A FRET Study | 544 |
| 20.2.5. Quenching Experiments To Evaluate the Partition Patterns of Sifuvirtide | 548 |
| 20.2.6. Adsorption of Sifuvirtide on DPPC Gel-Phase Membranes Confirmed by FRET | 548 |
| 20.2.7. In-Depth Location of the Peptides in Membranes | 550 |
| 20.2.8. T-20 and T-1249 Secondary-Structure Studies | 553 |
| 20.3. Conclusions—New Trends in HIV Fusion Inhibition by Peptides | 556 |
| References | 403 |

21. Induced Perturbations and Adopted Conformations in Membranes by the HIV-1 Fusion Peptide 565

José L. Nieva, Nerea Huarte, Shlomo Nir, and David Weliky

| | |
|---|------------|
| 21.1. Introduction | 567 |
| 21.2. FP-Induced Membrane Perturbations: Leakage and Fusion | 570 |
| 21.2.1. Leakage and Pore Formation in POPG Vesicles | 572 |
| 21.2.2. Induction of Fusion of Cholesterol-Containing Liposomes | 578 |
| 21.3. Structural Characterization by Low-Resolution Techniques | 580 |
| 21.4. Structural Characterization by High-Resolution NMR Techniques | 584 |
| 21.4.1. Background and Sample Preparation | 584 |
| 21.4.2. HFP in Detergent Micelles | 586 |
| 21.4.3. HFP Conformation in Membranes | 586 |
| 21.4.4. IHFP Tertiary Structure | 587 |
| 21.4.5. Membrane Location of HFP | 588 |
| 21.4.6. Membrane Insertion Angle of HFP | 589 |
| 21.4.7. Correlation of Structural Results with Fusion Activity | 590 |
| 21.4.8. Future Studies | 590 |

References 591

22. Membrane Binding of Cyclotides 597

Conan K. Wang, Yen-Hua Huang, Kathryn Greenwood, and David J. Craik

- 22.1. Background **599**
- 22.2. Surface Plasmon Resonance Studies **603**
 - 22.2.1. Liposome Preparation 603
 - 22.2.2. Formation of Lipid-Bilayer Membranes 604
 - 22.2.3. Cyclotide Binding to the Bilayer Membrane 605
- 22.3. NMR Studies **606**
 - 22.3.1. Binding of Kalata B1 to DPC Micelles 607
 - 22.3.2. IStructure and Orientation of Micelle-Bound Kalata B1 611
 - 22.3.3. Divalent Cation-Binding Site in Micelle-Bound Kalata B1 612
- 22.4. Functional Pores in Membranes **613**
 - 22.4.1. Lipid Systems for the Investigation of Membrane-Cyclotide Interactions 614
 - 22.4.2. Vesicle Preparation 615
 - 22.4.3. Dye Leakage Experiments 616
 - 22.4.4. Electrophysiological Recording 618
 - 22.4.5. Preparation of Liposomes 619
 - 22.4.6. Patch Clamping 620
- 22.5. Cell-Based Studies of Cyclotides **621**
 - 22.5.1. Hemolytic Properties 622
 - 22.5.2. Mammalian Cell Membrane Interaction 623
- 22.6. Summary **627**
- References 628

23. Time-Resolved Fluorescence Methodologies in the Study of Lipid-Peptide Interaction 673

Luis M. S. Loura and Manuel Prieto

- 23.1. Introduction **675**
- 23.2. Time-Resolved versus Steady-State Fluorescence Spectroscopy **677**
- 23.3. Instrumentation **679**
- 23.4. Data Analysis **681**
- 23.5. Methodologies and Results in Time-Resolved Fluorescence of Lipid-Peptide Systems **688**
 - 23.5.1. Lifetimes 688
 - 23.5.2. Anisotropy 689
 - 23.5.3. Quenching 692
 - 23.5.4. Förster Resonance Energy Transfer 697
- 23.6. Conclusions **702**
- Acknowledgments 703
- References **703**
