# PROTEIN CRYSTALLIZATION

**Second Edition**

edited by

**TERESE M. BERGFORS***Contents***Foreword . . . . . vii****Preface . . . . . xix****Contributors . . . . . xxiii****Part I. METHODS . . . . . 1****1. Some Words of Advice from an Old Hand . . . . . 3***Alexander McPherson***2. Rational Selection of Crystallization Techniques . . . . . 11***Joseph R. Luft and George T. DeTitta*2.1. Introduction . . . . . **13**2.2. Some Initial Considerations . . . . . **14**

2.2.1. Screening . . . . . 15

2.2.2. Optimization . . . . . 15

2.2.3. The Container . . . . . 15

2.2.4. Temperature . . . . . 6

2.3. Choice of Method . . . . . **17**

2.3.1. The Phase Diagram . . . . . 18

2.4. Batch Crystallization Methods . . . . . **19**

2.4.1. How to Set Up a Batch Experiment . . . . . 22

2.4.2. Batch Methods That Use Oil . . . . . 23

2.5. Vapor-Diffusion Crystallization Methods . . . . . 23

2.5.1. How to Set Up a Vapor-Diffusion Experiment . . . . . **24**

2.5.2. Choice of Reservoir Solution . . . . . 25

2.5.3. PEG Solutions and the Vapor Pressure of Water . . . . . 25

2.5.4. Volatile Additives . . . . . 26

2.5.5. Condensation . . . . . 26

2.5.6. Methods to Prevent Crystal Adhesion . . . . . 27

2.5.7. Containers and Supports for Hanging-Drop Experiments . . . . . 27

2.5.8. Sealants . . . . . 28

2.5.9. Sitting-Drop Vapor-Diffusion Methods . . . . . 29

2.6. Important Variables That Affect Kinetics . . . . . **29**

2.6.1. Drop Volume and Shape . . . . . 30

2.6.2. Chemical Concentrations . . . . . 30

2.6.3. Different Chemicals Have Different Rates of Equilibration . . . . . 30

2.6.4. Experiment Drop Volume Ratios . . . . . 31

2.6.5. Drop-to-Reservoir Volume Ratio . . . . . 31

2.6.6. Passive Methods to Regulate the Rate of Vapor-Phase Equilibration . . 32

2.7.	Liquid-Diffusion Crystallization Methods . . . . .	<b>32</b>
2.7.1.	Dialysis Liquid Diffusion . . . . .	33
2.7.2.	How to Set Up a Dialysis Experiment . . . . .	33
2.7.3.	Free-Interface Diffusion . . . . .	35
2.7.4.	Counterdiffusion . . . . .	35
2.8.	Practical Considerations for Crystallization Experiments . . . . .	<b>37</b>
2.8.1.	A Chronological Sequence for Hanging-Drop Setups . . . . .	37
2.8.2.	Mixing Experiment Drops . . . . .	38
2.9.	Some Final Thoughts . . . . .	<b>39</b>
2.10.	Summary of Key Points . . . . .	39
	Acknowledgments . . . . .	40
	Supplies . . . . .	<b>40</b>
	References . . . . .	<b>40</b>

### **3. Automation for Crystallization: Practical Considerations in Choosing a System . . . . . 47**

*Joseph R. Luft and George T. DeTitta*

3.1.	Introduction . . . . .	<b>49</b>
3.2.	Benefits of Automation . . . . .	<b>50</b>
3.2.1.	Reduced Requirements for Protein Sample . . . . .	50
3.2.2.	Replication . . . . .	51
3.2.3.	Unstable Proteins . . . . .	51
3.2.4.	Improved Output . . . . .	51
3.3.	Automation for Liquid Handling of the Stock Solutions . . . . .	<b>51</b>
3.3.1.	Formulation and Delivery of Cocktail Solutions . . . . .	52
3.3.2.	Wash Cycles . . . . .	54
3.4.	Automation for Crystallization . . . . .	<b>54</b>
3.4.1.	Crystallization Method . . . . .	55
3.4.2.	Screening, Optimization, or Both? . . . . .	55
3.4.3.	Retrieving Crystals . . . . .	56
3.4.4.	Dead, Priming, and Experiment Volumes . . . . .	56
3.4.5.	Contact or Noncontact Delivery . . . . .	57
3.4.6.	User Interface . . . . .	57
3.4.7.	Periodic Maintenance and Quality Control . . . . .	57
3.5.	Automation for Imaging the Experimental Outcomes . . . . .	<b>58</b>
3.5.1.	Image Quality . . . . .	58
3.6.	Automation for Information Management . . . . .	<b>59</b>
3.7.	Caveat Emptor (Buyer Beware) . . . . .	<b>60</b>
3.7.1.	Excess Capacity . . . . .	60
3.7.2.	Personnel Costs . . . . .	60
3.7.3.	Market Inquiries . . . . .	61
3.8.	Concluding Remarks . . . . .	<b>61</b>
3.9.	Summary of Key Points . . . . .	<b>62</b>
	Acknowledgments . . . . .	62
	References . . . . .	<b>63</b>

#### **4. Oils for Screening and Optimization . . . . . 65**

*Naomi E. Chayen*

- 4.1. Introduction . . . . . **67**
- 4.2. The Rationale for Crystallization under Oil . . . . . **68**
  - 4.2.1. The Microbatch Technique . . . . . 68
  - 4.2.2. Setting up Crystallization Trials by Microbatch . . . . . 68
  - 4.2.3. Crystallization of Membrane Proteins in Oil . . . . . 70
  - 4.2.4. Additional Benefits of Oil . . . . . 70
  - 4.2.5. Harvesting Microbatch Crystals . . . . . 71
- 4.3. The Effect of Different Oils on Microbatch . . . . . **72**
  - 4.3.1. The Use of Different Oils in Screening . . . . . 72
  - 4.3.2. Limitations of Crystallizing under Oil . . . . . 73
- 4.4. Use of Oils in Optimization . . . . . **73**
  - 4.4.1. Control of Nucleation . . . . . 74
  - 4.4.2. Elimination of Surface Contact Leading to Access Nucleation . . . . . 74
- 4.5. Oil for the Miniaturization and Automation of Crystallization in Gels . . . . . **76**
- 4.6. The Use of Oil for Controlling the Rate of Vapor-Diffusion Trials . . . . . **76**
- 4.7. Conversion between Vapor Diffusion and Batch/Microbatch . . . . . **77**
- 4.8. Summary . . . . . **79**
- References . . . . . **80**

#### **5. Crystallization in Gels and Capillaries . . . . . 83**

*Juan M. García-Ruiz*

- 5.1. Why Use Gels and Capillaries for Protein Crystallization? . . . . . **85**
- 5.2. Is Mass Transport by Diffusion Slower than Mass Transport by Convection? . . . . . **86**
- 5.3. Is a Diffusive Environment Better than a Convective One for Obtaining High-Quality Crystals? . . . . . **87**
- 5.4. Is There Convection in Vapor-Diffusion Experiments? . . . . . **88**
- 5.5. How Can Convection Be Reduced in Crystallization Experiments? . . . . . **88**
- 5.6. Which Gels Should Be Used? . . . . . **89**
- 5.7. Is It Better to Use Gels or Capillaries for Reducing Convection? . . . . . **89**
- 5.8. Can Gels and Capillaries Be Used with Classical Crystallization Techniques? . . . . . **90**
- 5.9. How Does the Counterdiffusion Technique Work? . . . . . **90**
- 5.10. Isn't a Test Tube Too Large for the Small Amount of Proteins Usually Available? . . . . . **91**
- 5.11. Is It Difficult to Fill Such a Small Capillary? . . . . . **92**
- 5.12. What Kind of Capillaries Should Be Used for Counterdiffusion? . . . . . **92**
- 5.13. Is It Possible to Cryoprotect the Crystals in the Capillaries? . . . . . **93**
- References . . . . . **93**

#### **6. Seeding . . . . . 95**

*Aengus Mac Sweeney and Allan D'Arcy*

- 6.1. Introduction . . . . . **97**
- 6.2. Streak Seeding . . . . . **99**

6.3.	Solution Microseeding . . . . .	<b>101</b>
6.3.1.	Preparing a Microseed Stock . . . . .	101
6.3.2.	Determining the Best Conditions for Solution Microseeding . . . . .	103
6.4.	Macroseeding . . . . .	<b>104</b>
6.4.1.	Obtaining the Best Possible Seed Crystals . . . . .	105
6.4.2.	Determining the Crystal Solubility . . . . .	105
6.4.3.	Determining Appropriate Crystal-Growth Conditions . . . . .	106
6.4.4.	Washing and Transferring Crystals . . . . .	106
6.4.5.	Feeding . . . . .	107
6.5.	Seeding When Using Additives . . . . .	<b>107</b>
6.6.	Automation and Microseeding . . . . .	<b>108</b>
6.7.	Heterogeneous Seeding . . . . .	<b>108</b>
6.8.	Summary . . . . .	<b>111</b>
6.9.	Summary of Key Points . . . . .	<b>112</b>
	References . . . . .	<b>113</b>
<b>7.</b>	<b>Heavy-Atom Derivatization . . . . .</b>	<b>115</b>
	<i>Zbigniew Dauter and Mirosława Dauter</i>	
7.1.	Why Heavy Atoms? . . . . .	<b>117</b>
7.2.	Precautions . . . . .	<b>119</b>
7.3.	Types of Heavy Atoms . . . . .	<b>120</b>
7.3.1.	Classic Heavy-Metal Compounds . . . . .	120
7.3.2.	Mercurials . . . . .	122
7.3.3.	Lanthanides . . . . .	123
7.3.4.	Metal Clusters . . . . .	123
7.3.5.	Noble Gases . . . . .	124
7.3.6.	Halides . . . . .	124
7.3.7.	Iodination of Aromatics . . . . .	125
7.3.8.	Rapid Soaks . . . . .	126
7.4.	Confirming Derivatization . . . . .	<b>127</b>
7.4.1.	Quick, Low-Resolution Data Collection . . . . .	127
7.4.2.	Mass Spectrometry . . . . .	127
7.4.3.	microPIXE . . . . .	128
7.4.4.	X-Ray Absorption Spectroscopy . . . . .	128
7.4.5.	Native Gel Shift Assay . . . . .	129
7.5.	Radiation Damage . . . . .	<b>129</b>
7.6.	Final Remarks . . . . .	<b>130</b>
	References . . . . .	<b>130</b>
<b>8.</b>	<b>Preparation and Crystallization of Selenomethionine Protein . . . . .</b>	<b>135</b>
	<i>Anna M. Larsson</i>	
8.1.	Why Use Selenomethionine (SeMet)? . . . . .	<b>137</b>
8.2.	When to Choose SeMet . . . . .	<b>138</b>
8.2.1.	Methionine Content . . . . .	138
8.2.2.	Expression Hosts . . . . .	139
8.2.3.	Incorporation Analysis . . . . .	139

8.3.	Other Related Approaches . . . . .	<b>141</b>
8.3.1.	Selenocysteine . . . . .	141
8.3.2.	Sulfur-SAD Phasing . . . . .	141
8.4.	Properties of SeMet . . . . .	<b>142</b>
8.4.1.	How to Avoid Oxidation . . . . .	142
8.4.2.	How to Induce Oxidation and Why . . . . .	142
8.4.3.	Sensitivity to Radiation Damage . . . . .	143
8.4.4.	Data Collection Strategies . . . . .	143
8.4.5.	L- or D,L-Selenomethionine . . . . .	143
8.4.6.	Warning . . . . .	143
8.5.	How to Express SeMet Protein . . . . .	<b>144</b>
8.5.1.	Expression of SeMet-Labeled Protein in <i>Escherichia coli</i> . . . . .	144
8.5.2.	Autoinduced Expression of SeMet-Labeled Protein in <i>Escherichia coli</i> . . . . .	145
8.5.3.	Expression of SeMet-Labeled Protein in <i>Pichia pastoris</i> . . . . .	145
8.6.	How to Purify and Crystallize SeMet Protein . . . . .	<b>146</b>
8.6.1.	Purification . . . . .	146
8.6.2.	Crystallization . . . . .	146
8.7.	Summary . . . . .	147
	References . . . . .	<b>148</b>

## **9. Crystal Handling for Cryogenic Data Collection . . . . . 155**

*Elspeth F. Garman*

9.1.	Introduction . . . . .	<b>157</b>
9.2.	Protocol for Finding Crystallization Conditions for Cryocrystallography .	162
9.3.	Practical Tips for Crystal Transfer and Handling . . . . .	<b>168</b>
9.4.	Methods for Introducing the Crystal into the Cryosolution . . . . .	<b>169</b>
9.4.1.	Soaking . . . . .	169
9.4.2.	Exchanging Mother Liquors . . . . .	169
9.4.3.	Osmolarity Matching . . . . .	170
9.5.	Postcrystallization Treatments . . . . .	<b>170</b>
9.5.1.	Dry Mounting . . . . .	170
9.5.2.	Annealing . . . . .	170
9.6.	Summary of Key Points . . . . .	<b>171</b>
	References . . . . .	<b>172</b>

## **PART II. TOOLS and STRATEGIES . . . . . 175**

### **10. Interpretation of the Crystallization Drop Results . . . . . 177**

*Johan Philip Zeelen*

10.1.	Introduction . . . . .	<b>179</b>
10.2.	The Stereomicroscope . . . . .	<b>180</b>
10.2.1.	Bright- and Dark-Field Illumination . . . . .	180
10.2.2.	Polarizers and Birefringence . . . . .	181
10.3.	Optical Methods for Distinguishing Crystals of Protein, Salt, and Detergent .	

	<b>182</b>
10.4.	Examination of the Crystallization Experiments . . . . . <b>184</b>
10.5.	Scoring . . . . . <b>185</b>
10.6.	Interpretation of the Drop Phenomena . . . . . <b>187</b>
	References and Further Reading . . . . . <b>193</b>
<b>11.</b>	<b>Mass Spectrometry Applications in Protein Crystallography . . . . . 195</b>
	<i>Sharon X. Gao and Marie Zhang</i>
11.1.	Introduction . . . . . <b>197</b>
11.2.	Mass Spectrometry Instrumentation . . . . . <b>198</b>
	11.2.1. Molecular Mass . . . . . 198
	11.2.2. MALDI-MS . . . . . 199
	11.2.3. ESI-MS . . . . . 202
	11.2.4. Matrix-Free Desorption or Ionization on Porous Silicon (DIOS) . . . . .
204	
	11.3. Applications of MS in Protein Structure Determination . . . . . <b>204</b>
	11.3.1. High-Throughput MS Methods for Monitoring Protein Purity . . . . .
205	
	11.3.2. Verification of Protein Primary Structure . . . . . 205
	11.3.3. Characterization of Posttranslational Modifications . . . . . 207
	11.3.4. Detection of Heavy Atoms for Phasing . . . . . 209
	11.3.5. Limited Proteolysis MS for Domain Mapping . . . . . 210
	11.3.6. Large-Scale Limited Proteolysis and Crystallization Studies . . . . . 211
	11.3.7. Probing Higher-Order Protein Structure with MS . . . . . 211
	11.3.8. Analysis of the Content of Protein Crystals by MS . . . . . 212
	11.4. Concluding Remarks . . . . . <b>213</b>
	References . . . . . <b>214</b>
<b>12.</b>	<b>Dynamic Light Scattering . . . . . 221</b>
	<i>Ulf Nöbbmann and Terese Bergfors</i>
12.1.	Introduction . . . . . <b>223</b>
	12.1.1. How Does DLS Work? . . . . . 226
	12.1.2. Relationship between Hydrodynamic Radius and Mass . . . . . 229
	12.1.3. How Is the Dispersity Profile Obtained? . . . . . 230
12.2.	Practical How-To . . . . . <b>233</b>
	12.2.1. Comparison with the Native PAGE . . . . . 233
	12.2.2. Sample Preparation: Volume and Concentration . . . . . 234
	12.2.3. Filtration . . . . . 235
	12.2.4. Temperature . . . . . 235
	12.2.5. More Things to Try: Increase the Ionic Strength . . . . . 236
	12.2.6. Change the pH . . . . . 237
	12.2.7. Increase Protein Concentration . . . . . 37
	12.2.8. Additives . . . . . 238
12.3.	Thermal Stability Measurements with DLS . . . . . <b>240</b>
12.4.	Data Interpretation . . . . . <b>241</b>
12.5.	Some Recommendations for Handling Your Protein Based on Its DLS Profile

<b>242</b>	
12.5.1. Monodisperse Samples (approximately 20% or less) . . . . .	242
12.5.2. Monodisperse Samples (approximately 30% or less) . . . . .	242
12.5.3. Bimodal and Polydisperse Samples . . . . .	243
12.6. Summary of Key Points . . . . .	<b>243</b>
References . . . . .	<b>244</b>

### **13. Improving Protein Crystallizability by Modifications and Engineering . . . . . 247**

*Xiayang Qiu and Cheryl A. Janson*

13.1. Introduction . . . . .	<b>249</b>
13.2. Ligand Additions and Complexes . . . . .	<b>250</b>
13.2.1. Cofactors, Substrates, Inhibitors, and Other Ligands . . . . .	250
13.2.2. Protein–Protein and Protein–Nucleic Acid Complexes . . . . .	251
13.2.3. Complexes with Antibody Fragments . . . . .	251
13.3. Chemical and Biochemical Modifications . . . . .	<b>252</b>
13.3.1. Chemical Modification . . . . .	252
13.3.2. Biochemical Modification . . . . .	253
13.4. DNA-Construct Modification . . . . .	<b>254</b>
13.4.1. Affinity Tags and Protease Removal Sites . . . . .	254
13.4.2. Defining Domains for Construct Design . . . . .	255
13.4.3. Surface Mutations to Improve Solution Properties . . . . .	257
13.4.4. Surface Mutations to Facilitate Crystal Packing . . . . .	258
13.4.5. Metal–Ion-Mediated Crystallization . . . . .	260
13.5. Concluding Remarks . . . . .	<b>262</b>
References . . . . .	262

### **14. Handling the Protein Sample . . . . . 267**

*Terese Bergfors*

14.1. Characterization of the Protein . . . . .	<b>270</b>
14.2. Concentrating the Protein . . . . .	<b>271</b>
14.3. Storage of the Protein . . . . .	<b>273</b>
14.3.1. Freezing . . . . .	273
14.3.2. Lyophilization . . . . .	276
14.3.3. Ammonium Sulfate Precipitation . . . . .	277
14.3.4. Heat Shock . . . . .	277
14.4. Buffer Choice: Implications for Screening . . . . .	<b>279</b>
14.5. Other Components in the Start Buffer . . . . .	<b>282</b>
14.5.1. Water . . . . .	282
14.5.2. Sodium Azide . . . . .	283
14.5.3. Reducing Agents . . . . .	284
14.6. Buffer Choice: Implications for Screening . . . . .	<b>287</b>
14.7. Other Components in the Start Buffer . . . . .	<b>289</b>
Acknowledgments . . . . .	289
References . . . . .	<b>290</b>

## **15. Two Approaches for Initial Screening: Evolution and Intelligent Design . . . . . 293**

*Janet Newman*

- 15.1. Introduction . . . . . **295**
- 15.2. Why Design a New Screen? . . . . . **296**
  - 15.2.1. Learning from the Past: Evolution (JCSG+) . . . . . 297
  - 15.2.2. Intelligent Design (PACT) . . . . . 298
  - 15.2.3. Does Limited Screening Work? . . . . . 302
- 15.3. Screening to Ease Optimization . . . . . **303**
- 15.4. Designing Your Own Screen . . . . . **306**
- 15.5. Summary of Key Points . . . . . **307**
- Supplies . . . . . **307**
- References . . . . . 307

## **16. Strategies for Protein Crystallization Screening . . . . . 309**

*Bernhard Rupp*

- 16.1. Introduction . . . . . **311**
  - 16.1.1. Protein Crystals . . . . . 312
  - 16.1.2. Basics of Protein Crystallization . . . . . 313
  - 16.1.3. Beating the Odds . . . . . 313
- 16.2. Designing Your Protein . . . . . **314**
  - 16.2.1. Constructs and Tags . . . . . 314
  - 16.2.2. Batch Variation and Contaminants . . . . . 315
  - 16.2.3. Protein Concentration . . . . . 315
  - 16.2.4. Purity, Freshness, and Conformational State . . . . . 316
  - 16.2.5. Buffers, Salts, and Additives . . . . . 316
  - 16.2.6. Temperature . . . . . 316
- 16.3. Choice of Crystallization Technique . . . . . **317**
- 16.4. Crystallization Screening . . . . . **318**
  - 16.4.1. Crystallization As a Multivariate Sampling Problem . . . . . 319
  - 16.4.2. Factorial Designs . . . . . 320
  - 16.4.3. Sparse-Matrix Sampling . . . . . 321
  - 16.4.4. Random Sampling and Number of Experiments . . . . . 322
  - 16.4.5. Screening toward Optimization . . . . . 322
  - 16.4.6. Practical Two-Tiered Approaches . . . . . 323
- 16.5. Robotics in the Academic Laboratory . . . . . **324**
- 16.5. Summary of Key Points . . . . . **326**
- References . . . . . **327**

## **17. Additives and Microcalorimetric Approaches for Optimization of Crystallization . . . . . 331**

*Joanne I. Yeh*

- 17.1. Introduction . . . . . **333**
- 17.2. Classes of Additives . . . . . **334**
  - 17.2.1. Cosmotropes . . . . . 334
  - 17.2.2. Cations . . . . . 335

17.2.3. Polyols and Sugars . . . . .	335
17.2.4. Amino Acids . . . . .	336
17.2.5. Linkers . . . . .	336
17.2.6. Cofactors, Ligands, Substrates (Effectors) . . . . .	337
17.2.7. Reducing Agents and Chelators . . . . .	337
17.2.8. Chaotropes . . . . .	339
17.2.9. Surfactants . . . . .	339
17.3. What Concentration of Additive to Use . . . . .	<b>341</b>
17.4. Calorimetry Studies on Additives . . . . .	<b>342</b>
17.4.1. Instrumentation . . . . .	344
17.4.2. ITC and DSC Results . . . . .	346
17.5. Summary . . . . .	347
References . . . . .	<b>347</b>

### **PART III. LABORATORY EXERCISES . . . . . 351**

#### **LE. Laboratory Exercises . . . . . 353**

LE1. Setting Up Microbatch Trials . . . . .	<b>355</b>
<i>Naomi E. Chayen</i>	
LE2. Limiting the Amount of Nucleation and Enhancing the Reproducibility of Experiments by Filtration . . . . .	<b>359</b>
<i>Naomi E. Chayen</i>	
LE3. Containerless Crystallization . . . . .	<b>363</b>
<i>Naomi E. Chayen</i>	
LE4. Insertion of Oil Barriers to Slow Down Vapor-Diffusion Experiments . . . . .	<b>367</b>
<i>Naomi E. Chayen</i>	
LE5. Improving Crystal Quality by Separating Nucleation and Growth in Hanging Drops . . . . .	<b>371</b>
<i>Naomi E. Chayen</i>	
LE6. Seeding with Lysozyme . . . . .	<b>375</b>
<i>Aengus Mac Sweeney</i>	
LE7. Studying the Influence of Supersaturation and Supersaturation Rate with the Crystallization Mushroom . . . . .	<b>387</b>
<i>Juan Manuel García-Ruiz and Luis A. González-Ramírez</i>	
LE8. Capillary Counterdiffusion Experiments with Granada Crystallization Boxes . . . . .	<b>395</b>
<i>Juan Manuel García-Ruiz and Luis A. González-Ramírez</i>	
LE9. Evaluation of Cryoprotectant Solutions . . . . .	<b>401</b>
<i>Elsbeth F. Garman</i>	
LE10. Optimization Experiment with Additives . . . . .	<b>405</b>
<i>Terese Bergfors</i>	
LE11. Comparing Salt and Protein Crystals by Two Methods . . . . .	<b>409</b>
<i>Terese Bergfors</i>
